# A POLICE VEHICLE MUST BE ABLE TO DO WHAT A CIVILIAN VEHICLE CAN DO... AND THEN SOME!

At Pontiac, we couldn't agree with this description more.

But we also know that alert and progressive police fleet buyers are finding it more important to identify and satisfy their specific police vehicle needs. And, currently, two of the most sought after vehicle qualities are versatility and performance.

Today, a police vehicle is expected to be able to perform in a variety of roles, both by itself and when teamed with other vehicles... and do it with a minimum of down-time and operating costs.

The 1977 line of Pontiac police vehicles is ideally suited to meet these stringent requirements. The all-new Catalinas provide full-size interiors and performance levels with reduced exterior bulk and road weight. The compact Venturos perform admirably in urban patrol situations, or for one-man patrols. And the intermediate-size LeMans is a smart choice where one needs a practical mid-size patrol vehicle or a high-performance pursuit vehicle.

But Pontiac also recognizes that most of the duty time in a police vehicle is spent between

active police functions. The need, then, is for quiet, comfortable, relaxing environments for the officers, qualities in which '77 Pontiac police vehicles excel. That's one reason why Pontiac offers police fleet buyers a choice of three types of front seats... full-width, solid-back bench seats (sedans and wagons), individually-adjustable bucket seats (avail. all models), or the individually-adjustable 60/40 full-width seat (Catalina or LeMans), each with full-depth foam seat construction.
